

BizCubed

TRUE TO YOURSELF
REPORTING

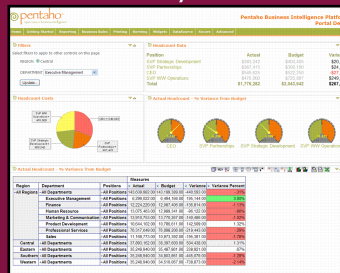

REPORTING: See your data on the web

DRILLABLE REPORTS: Conduct detailed analysis

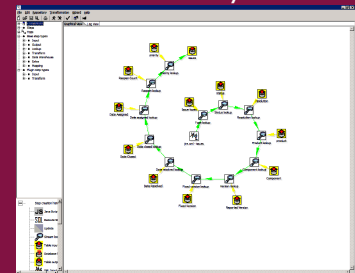

DASHBOARDS: Overview of your business

ETL: KETTLE

Pull data from any source

Tired of large invoices before you see a result?

Want to get started with Business Intelligence Fast?

Delivering Open Source Business Intelligence

Do you need to see your data online now?

Our unique jumpstart package, hosted on our secure server means that you have access to your data using the same security as banks and big internet companies, and you have it fast!

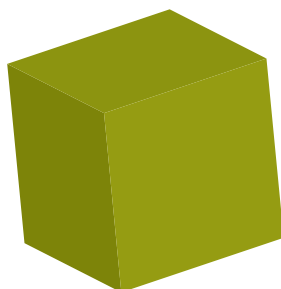

Are you tired of how long it takes your team to get something running?

We can come into your office and build you a BI solution on your data in a week. You will have drillable reports, ad hoc reporting, charts and graphs all based on your businesses data!

Are you going to be locked in?

We never lock our clients into our services or solutions! We provide you with documentation and a DVD with the entire server, operating system, database, and software so your team can bring it up fast! Alternatively, one of our consultants can come to your site and install it on your server.

Jump Start

We deliver the first building block of a robust, scalable enterprise Business Intelligence solution for your business.

Process

Result

Value

Complete template
We work with you on day 1 to fill in our template, grab a data dump, and build an understanding around the initial deliverables.

An initial agreed upon specification
Both organisations are clear about exactly what the data is and what the end result will look like.

No surprises
You know what you are getting. We know what to deliver.

Build environment and reports
Our team of experienced Pentaho and Java developers take your template and build examples of all of the major components.

Your data on our secure server
You will be able to see and use the entire Pentaho toolkit with your data quickly and securely.

Immediate results
You will be able to see your data and information fast, securely and in ways you have never been able to before. All from any browser anywhere in the world!

Review results with you
We come back and walk through all of the components that we have built.

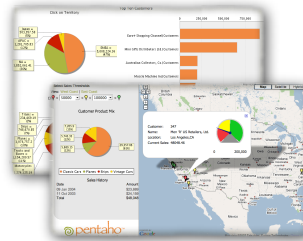

Your team understands
You and your team understand what has been accomplished.

You can manage your solution
You are not locked in. You understand what has been accomplished and can intelligently decide how to move the project forward.

What is included in your Jumpstart!

Dashboards:

We provide you with a couple of templates and you tell us the type of charts and graphs you would like to see on your dashboards. We also provide sample reports on a Google maps dashboard! When you click on elements on the charts, it will take you into a more detailed report.

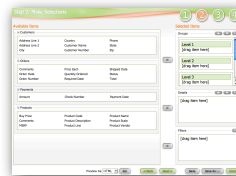

Markets	QTR1		QTR2	
	Quantity	Sales	Quantity	Sales
All Markets	10,995	1,111,260	8,480	869,558
APAC	1,159	126,010	2,332	231,008
Australia	804	86,742	696	58,350
NSW	595	65,012	532	43,071
Queensland	209	22,730		
Victoria			164	14,376
New Zealand	355	39,268	1,489	150,072
Singapore	44	4,170	67	2,040
EMEA	5,707	540,842	3,330	388,987
Japan	365	42,367	15	558
NA	3,764	402,941	2,683	359,016

Drillable Reports (OLAP):

These reports allow you to "drill" through your data so that you can see the areas of interest to you. We will build three dimensions, one of which will be date, and the other two will be defined by you. These drillable reports will have one "fact" level, for example sales orders.

Ad-Hoc Web reports:

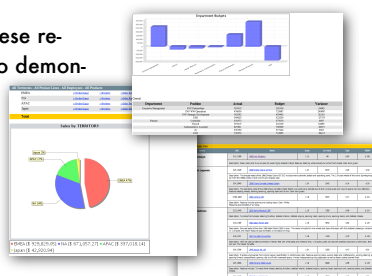

We will take a sub-set of your data and build a layer that removes the complexity of database joins, puts real words as the descriptions and will provide you the ability to use the web to design your own reports on your data.

Standard Reports:

We will build you a set of 5 reports on your data. These reports will be defined by you. They will be designed to demonstrate key functionality within the platform.

- Simple Prompt report
- Advanced prompt functions
- Secured report based on role
- Promptable report based on drillable report
- One custom report built just for you

Hosting Specifications:

Server:

- Virtual Server
- 1 GB Ram
- Shared 64Bit Quad core CPUs
- Raid Disks
- Java = JDK 1.5

Software:

- Pentaho 1.6
- Kettle 2.5
- Report Designer 1.6

Database:

- MySQL 5.0

Security:

- Database locked so it can only be accessed by web server
- Access controlled by Pentaho security
- Data served over SSL

Terms and Conditions:

- Total size of files must be under 500MB
- Files must either be delivered in excel or csv format.
- All reports will be 3 joins or less
- Drillable reports include three dimensions
- Ad Hoc Reports include three tables
- Data clean - up and data quality issues are not included in this jumpstart
